of

## TRANSPORT REVOLUTIONS Moving people and freight without oil

by

**Richard Gilbert** and **Anthony Perl**

To be published by **EARTHSCAN** (London, UK) in December 2007

### PREFACE AND ACKNOWLEDGEMENTS

#### INTRODUCTION: TRANSPORT REVOLUTIONS AHEAD ..... 1

What is in this book.....	1
Who could benefit from this book, and how.....	4
Sources and terminology.....	7
Notes.....	9
Sources.....	10

#### CHAPTER 1: LEARNING FROM PAST TRANSPORT REVOLUTIONS ..... 11

Overview.....	11
Britain's railway revolution of 1830 to 1850.....	15
The great wartime pause in motorization in the US.....	19
The big switch in transatlantic travel in the 1950s.....	27
The high-speed rail revolution of 1960 to 1985.....	32
The air freight revolution of 1980 to the present.....	40
Reflections on past revolutions.....	44
Gaining perspective on major mobility changes, 44	
Characterizing profound mobility change along four dimensions, 45	
Notes.....	46
Sources.....	52

#### CHAPTER 2: TRANSPORT TODAY ..... 57

Introduction.....	57
How people move locally.....	60
Differences among urban regions, 60	
Differences in travel within a region, 63	
Car ownership in Europe and the US, 66	
Car ownership and use in China, particularly Beijing and Hong Kong, 67	
Bicycle use in China, 67	
Cars in China are small, 69	
Travel by urban and rural residents, 69	
Factors in local travel, 72	

More on the costs of car use, 74	
Key constancies: travel time per day and annual distance travelled per car, 75	
Causes of local motorized travel by car, 79	
How people move across distances .....	80
Longer-distance travel in context, 80	
How longer-distance travel is performed, and why, 80	
Tourism, 82	
Trends in air travel, 83	
Low-cost carriers, 83	
Determinants of longer-distance travel, 87	
How freight moves .....	87
Freight transport is mostly ignored, 87	
Freight movement by mode, 88	
Shipping containers, 92	
Factors in freight transport activity, 93	
Transport tomorrow? .....	95
Notes .....	97
Sources.....	107
<b>CHAPTER 3: TRANSPORT AND ENERGY .....</b>	<b>112</b>
Introduction.....	112
Oil and its future.....	113
Production of transport fuels, 113	
World consumption of transport fuels, 114	
Oil discoveries, reserves and extraction (production), 116	
Production of petroleum liquids to peak in about 2012, 119	
Position of the International Energy Agency, 120	
Doubts about reserves, 122	
Estimating oil price increases, 124	
Oil futures, 126	
Future price possibilities, 127	
Alternatives to oil products.....	128
Natural gas, 128	
Coal, 129	
Biofuels, 131	
Hydrogen, 136	
Electricity, 138	
Electric vehicles .....	139
Battery-electric vehicles, 139	
Hybrid ICE-electric vehicles, including plug-in hybrids, 141	
Grid-connected vehicles, 145	
Evolution and assessment of grid-connected vehicles, 146	
Disadvantages of grid-connected vehicle systems, 148	
Generating enough electricity for transport.....	150
How much electricity would be required, 150	
How enough electricity could be produced, 152	
Notes .....	154
Sources.....	170
<b>CHAPTER 4: TRANSPORT'S ADVERSE IMPACTS.....</b>	<b>178</b>
Introduction.....	178
Global environmental impacts .....	181
Climate change, 181	
Other global effects of transport, 184	
Climate change and oil depletion, 185	
Reducing transport's oil use and GHG emissions, 190	
Conclusion concerning global environmental impacts, 195	

Local and regional environmental impacts .....	195
Transport emissions in the US, 196	
Air quality in the US, 201	
Transport emissions and air quality in Europe and elsewhere, 203	
Non-road modes and air quality, 206	
Impacts of transport-related poor air quality, 206	
Concluding remarks concerning transport's impacts on air quality, 208	
Other impacts, including those of noise, 208	
Adverse societal and economic impacts.....	213
Transport-related fatalities and injuries, 213	
Adverse societal impacts, 218	
Adverse economic impacts, 219	
Relative impacts of transport modes and means of traction.....	221
Notes .....	223
Sources.....	240
<b>CHAPTER 5: THE NEXT TRANSPORT REVOLUTIONS .....</b>	<b>248</b>
Setting the scene for 2025.....	248
Scenarios for 2025 for the US .....	253
Moving people in 2007 and 2025, 253	
Moving freight in 2007 and 2025, 256	
Implementing transport redesign in the US .....	259
National security will justify US government leadership, 259	
Launching revolutions: 1. Create a transport redevelopment agency, 260	
Launching revolutions: 2. Terminate highway and airport expansion programmes, 262	
Launching revolutions: 3. Tax oil-based transport fuels, 263	
Developing rail in the US, 265	
The dynamics of change, 271	
Scenarios for 2025 for China .....	274
Moving people in 2007 and 2025, 276	
Moving freight in 2007 and 2025, 278	
Launching China's transport revolutions.....	280
Electricity generation in the US and China .....	285
Moving into the future .....	287
Notes .....	288
Sources.....	296
<b>CHAPTER 6: LEADING THE WAY FORWARD .....</b>	<b>300</b>
Saudi Arabia could be the tipping point .....	300
China could change course in 2008 .....	305
A new US president could inaugurate a new transport era.....	308
Notes .....	311
Sources.....	314
<b>INDEX .....</b>	<b>315</b>
